DETAILED ACTION

1. This action is in response to the application filed 3/12/1999.
2. Claims 1-21 have been examined and are pending in the application.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1-21 are rejected under 35 U.S.C. 102(e) as being anticipated by Proskauer U.S Patent No. 5,828,674,

As to claim 1, Proskauer discloses producing a display module which displays a graphical representation of a user interface (2022, Fig. 2) of a machine (equipment, line 24 column 3) on a display of the computer (2000, Fig. 2); associating the graphical representation with a control signal (executive 2016 to tester control 2014, Fig. 2); producing a control module (2014, Fig. 2) to examine the graphical representation and the control signal; producing a communication module to communicate the control signal (2021, Fig. 2) using the standard communication protocol for process control (lines 47-54 column 4, and lines 45-52 column 6); producing a framework module to

interconnect functionally the display, control, and communication modules (lines 36-58 column 3); and merging the modules to create the real-time interactive control (lines 28-46 column 4) and communication software objects (self contained control objects, line 37 column 3).

As to claim 2, Proskauer further discloses Object linking and embedding for Process Control protocol (ActiveX, line 50 column 2).

As to claim 3, Proskauer further discloses objects insertable using standard object insertion techniques (lines 33-39 column 4).

As to claim 4, Proskauer further discloses ActiveX control objects (ActiveX, line 50 column 2).

As to claim 5, Proskauer further discloses examining the graphical representation and the control signal periodically (lines 53-63 column 6).

As to claim 6, Proskauer further discloses examining when a change in the graphical representation of the user interface is detected (lines 59-65 column 3).

As to claim 7, Proskauer further discloses examining when a change in the associated control signal is detected (listens to the events, line 54 column 6).

As to claim 8, Proskauer further discloses pre-fabricated software module (2010, fig. 2).

As to claim 9, Proskauer further discloses a pre-fabricated software image of the graphical representation (controls from a library of ActiveX controls, lines 32-33 column 4).

As to claim 10, Proskauer further discloses compiling the framework module into a compiled module and linking the compiled module with the modules (lines 24-27 column 4).

As to claim 11, Proskauer further discloses interpreting the modules (lines 55-67 column 4).

As to claims 12-18, note the discussions of claims 1-7 above, respectively.

As to claim 19, note the discussions of claims 8-9 above.

As to claims 20-21, note the discussions of claims 10-11 above, respectively.
